TuxCare

# Solutions Guide

**Security, Compliance, and Support for Open Source**

TuxCare helps organizations secure open source from adoption through end of life and beyond. Our solutions reduce supply-chain risk, keep vulnerabilities patched, extend software lifecycles, and support the tools your business depends on.

## SecureChain

Get verified, malware-scanned open source packages That remain protected throughout their lifecycle, **from install to EOL**, when Endless Lifecycle Support takes over.

tuxcare.com/securechain-for-oss

## Endless Lifecycle Support

Ongoing security updates to end-of-life and out-of-support versions of the open source software you rely on.

### Endless Lifecycle Support for Operating Systems

### Endless Lifecycle Support for Libraries

### Endless Lifecycle Support for Runtimes

### Endless Lifecycle Support for Applications

TRUSTED BY encoway standard for variety

"ELS enables us to keep our promise on our lifecycle for releases. That's really the point – and something we were not offered anywhere else."

## KernelCare

Rebootless kernel security patching across 70+ Linux distro versions. Cuts patching time by 72% and shrinks your vulnerability window by 90%.

Include rebootless patching for **glibc** and **OpenSSL** with the **LIbCare** add-on.

TRUSTED BY proofpoint.

"TuxCare services allow for faster, more consistent, and easier updates. Any customer of KernelCare will see value almost immidiately."

## TuxCare Enterprise Support

Enterprise-grade OS support for AlmaLinux and Rocky Linux that delivers RHEL-equivalent capabilities – 16-year lifecycle coverage, FIPS 140-3 validated cryptography, rebootless patching, DISA STIG and CIS benchmark hardening support, and 24×7 expert assistance – under a single SLA across both distributions.

AlmaLinux

Rocky Linux

TRUSTED BY

SRC

"Having TuxCare be able to provide third-party support for AlmaLinux just made a lot of sense. It was very flexible for us, it got us exactly what we needed, and the end result is that we have a very strong third-party supported environment."

## Custom Kernel Engineering

Linux kernels built and maintained for specialized environments: custom drivers and hardware optimizations, compatibility for mission-critical legacy systems, kernel-level hardening and module signing, tuning for ultra-low latency or high throughput, and certified modifications for regulated environments.
