Datasheet

Hardened, Compliance-First Linux Support for the Public Sector

Predictable support and government-grade security no longer require an expensive commercial OS.

With **TuxCare Enterprise Support (TES)**, your team gets predictable expert support and enterprise-optimized features on your community Linux OS – no costly commercial distro required.

From TuxCare

The Public Sector's Linux Dilemma

Federal, state, and local agencies (as well as the contractors they work with) rely on Linux to run essential services, but maintaining compliance and uptime under frameworks like FedRAMP, FISMA, and FIPS 140-3 can be complex. Vendor lock-in, costly licensing, unpredictable updates, and support limitations of community Linux distros make it difficult for IT teams to stay secure and mission-ready.

The Smart Alternative to Expensive Commercial Distros

TuxCare Enterprise Support (TES) delivers continuous security updates, validated builds, and extended lifecycle support for community OSs like AlmaLinux. With TES, compliance is easier, audits are smoother, and Linux support experts are always just a few clicks away. TES isn't just patch delivery and compliance-ready builds, it's a partnership that ensures stability, compliance, and long-term reliability without the vendor restrictions you'll encounter with pricey commercial Linux distro vendor offerings.

Key Benefits

Continuous Protection

- Receive ongoing vulnerability coverage and proactive updates
- FIPS-aligned builds for compliance-ready deployments
- Consistent patch delivery for mission-critical systems

Compliance Confidence

- Meets control expectations for FedRAMP, FISMA, and FIPS 140-3
- Audit-friendly documentation for patch and configuration evidence.
- Enables secure operations in air-gapped and regulated environments

Operational Efficiency

- Simplified lifecycle management for AlmaLinux (and Rocky Linux)
- Predictable, subscription-based pricing: no hidden costs or lock-in.
- Expert, 24/7 support from a dedicated Linux team.

Why TuxCare?

TuxCare secures the open-source software the world builds on. Today, we power over 1.2 million workloads, keeping them secure, compliant, and unstoppable at scale. We power your stack with enterprise-strength security and support that never quits: rebootless patching for every major Linux distribution, enterprise-optimized support for community Linux, and endless lifecycle extensions for out-of-support versions of the open-source OSs, applications, runtimes, and libraries your team relies on.
