Enterprise Linux Support and Security for Critical Healthcare Systems

TuxCare Enterprise Support (TES) keeps Linux-based healthcare systems patched and compliant without disrupting care delivery or validation cycles.

TuxCare Enterprise Solutions Designed for Healthcare

Systems stay secure, compliant, and operational at all times — without downtime, lock-in, or unnecessary costs.

EHR/EMR systems	Imaging tools	Telehealth platforms	PACS servers	Pharmacy management	Remote monitoring

Protect Patient Data, Keep Care Running

In healthcare, even the briefest downtime can disrupt operations — interrupting patient care, delaying diagnoses or treatments, and affecting essential health services. TuxCare helps prevent these issues through rebootless patching and continuous security updates without shutting down systems.

Zero Downtime for Patient-Critical Systems

Apply security updates without reboots or forced upgrades that clash with healthcare systems and validation cycles.

Ongoing Security for Legacy Systems

Extend lifecycle support for end-of-life legacy systems and long-term validated Linux environments.

Healthcare-Grade Compliance

Security and documentation built for regulated environments, supporting always-on access to sensitive patient data.

Enterprise Linux Support on Your Terms

Get support for AlmaLinux, Rocky Linux, and mixed RHEL-compatible environments, without restrictive contracts or needless premium tiers.

Why Healthcare IT Teams Choose TuxCare

- Rebootless live patching for always-on patient-critical systems
- Strong encryption for PHI protection
- HIPAA, HITRUST, and SOC 2-aligned work lows
- Verifiable patch reports and audit-ready documentation
- Multi-distro coverage under a single SLA
- 24/7 break-fix support and security hardening advice

TuxCare for Healthcare

Secure critical systems and simplify healthcare IT operations while protecting patient data and maintaining uptime and regulatory compliance.

Get custom TuxCare Enterprise Solutions tailored for healthcare environments at tuxcare.com/use-case/healthcare.

Enterprise support for healthcare providers relying on Linux systems for critical operations:

- Hospitals
- Clinics
- Healthtech vendors
- Imaging centers
- Telehealth providers
- Pharmacies and laboratories
- Remote patient monitoring programs
